

State Agency for Land Resources of Ukraine presented wide exposition at "AGRO-2014" exhibition

Wednesday, 04 June 2014 16:10

During the XXVI International Agricultural Exhibition-Fair "AGRO-2014", which has been opened today in Kyiv, at National Complex Expocentre of Ukraine, SALR introduced a wide exposition. For example, State Scientific and Production Enterprise "Cartography" – a leading enterprise that is supervised by SALR, offers and demonstrates on its stands production and services for agriculture, including the creation of geo-information systems of agricultural complexes, implementation of spatial analysis and modeling of agro-industrial objects and enterprises, farmlands, monitoring of the environmental situation based on current digital topographic maps of different scales.

Geo-informational systems based on spatial information may significantly speed up and improve the organization level of production both on the basis of a single agricultural enterprise, and state level, are modern and practical tool for implementing new approaches in the management of agricultural enterprises.

The exhibit of the State Enterprise "Center of State Land Cadastre" that is the main administrator of the automated system of the state land cadastre and a leader on national market of land management and evaluation activities, geographic information systems also caused interest among the visitors. Technologies for development of various information and cartographic materials which serve for effective planning and land use (for example to determine the qualitative characteristics of land, proper placement and rotation as a basis for designing erosion, waterworks, etc.) were presented at the exhibition. Composite map is used for providing the records of land cadaster which is carried by territorial community within the authority. It displays the actual information about land plots that were transferred to the ownership or use, land use condition etc.

Employees of the institute for more than 50 years have been developing the materials that became basis for State land cadaster. Today these enterprises are in integrated system. They are able to perform a significant amount of work on land management, land protection and land evaluation activities.

During the exhibition (from 4 to 7 of June 2014) visitors will be able to get acquainted with work of scientists and practitioners from enterprises which are supervised by SALR and establish the collaboration with them.
