

Lozova Machinery signs contracts of more than 50 mln UAH at the AGRO 2016

KYIV. June 23 (Interfax-Ukraine) – Lozova Machinery (the brand of tillage machines made by UPEC Group’s enterprises, Kharkiv region) at the AGRO 2016 exhibition held in Kyiv in June have signed contracts to supply agricultural machinery worth over UAH 50 million, Vice President for Marketing and Sales of UPEC Group Roman Girshfeld has told Interfax-Ukraine.

“We have signed contracts to supply tillage tools worth UAH 35 million to Ukrainian companies. Contracts to supply machinery worth over UAH 10 million to dealers from Eastern Europe, as well as machinery also worth over UAH 10 million to Moldova and Transnistria,” he said.

He did not specify the names of the companies. He said that demand on Lozova Machinery is large, as the company has realized some innovative solutions.

Ducat disk harrows, for example, allow saving up to 30% of fuel and increase efficiency by 1.5 times compared to usual disk harrows thanks to application of spring tines and HARP Bearing Agro Units. Farmers increasingly think over the use of advanced agricultural technologies and resource-saving technology in the face of decline in prices at commodity markets. One such solution is the energy-efficient equipment of “Lozova machinery,” noticed Girshfeld. He said that the company seeks to expand the line of disk harrows and cultivators.

Lozova Machinery at AGRO 2016

“Lozova machinery” is a brand of tillage agricultural machinery, manufactured by Lozova forging-mechanical plant, which is part of the UPEC Industrial Group – one of the leading Ukrainian private companies specializing in machine building.
